Project Scope and Audience

- Speak2Me is an interactive news application where anyone can narrate and upload a news article for other ones to read
- Speak to me is directly targeted at three different audience groups:
 - Car commuters
 - Bus or train commuters
 - Pedestrians
- The main focus of the application is to provide a hands free option of receiving news articles for people unable or unwilling to look at a screen.

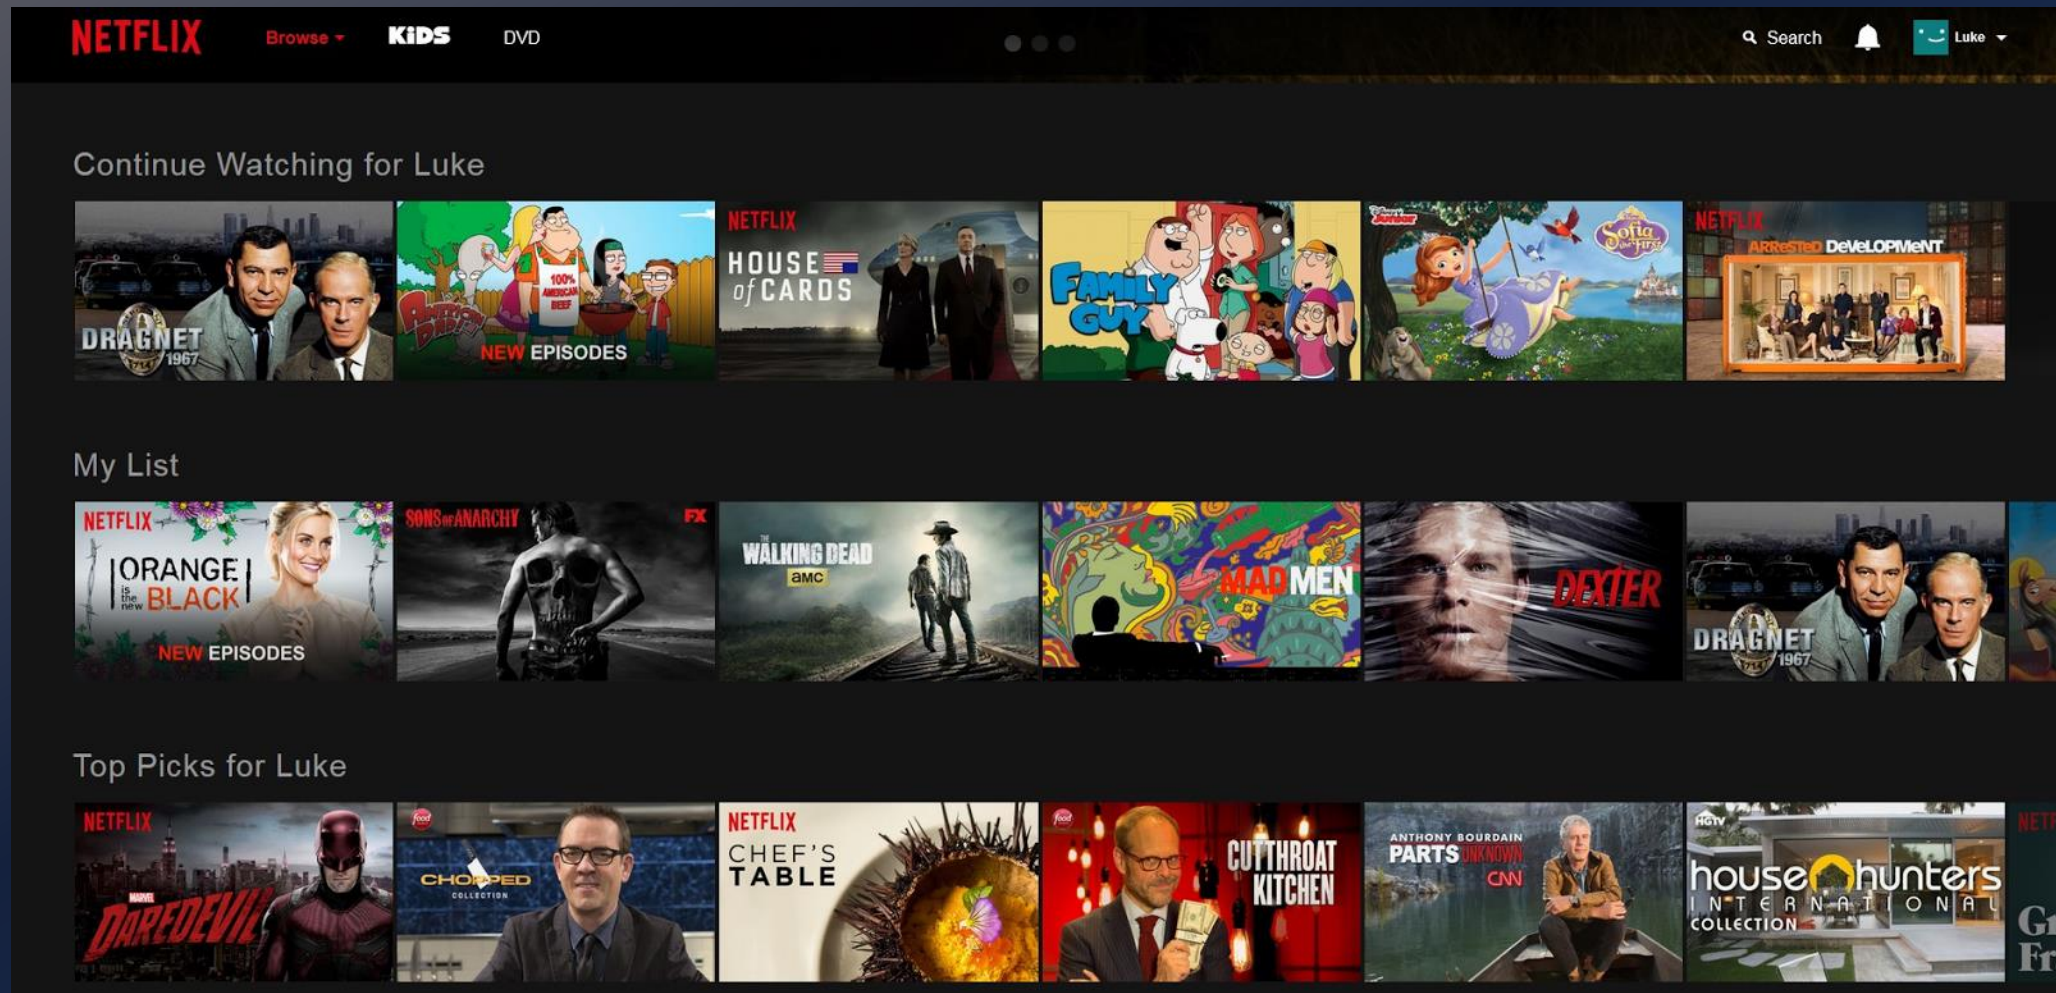

Design Focus

- The focus of speak2me was based on the deliverable of content and how a user receives and accesses a curated news article
- Based on this, the prototype will include:
 - Curated process for selection of article to show or play next for user
 - Web structure of the application interface
 - Account creation and tag selection
 - Listening functionality and interaction

First Prototype Structure

- The first design iteration included using effective web interfaces from recognizable websites*
 - Netflix stream and category division for the main page look
 - Spotify Submenu to divide subcategories
 - Pinterest account menu for tag selection
 - Spotify music stream for minimalistic design
- *refer to design structure prototype pdf for detailed explanation of each selection

Article Stream

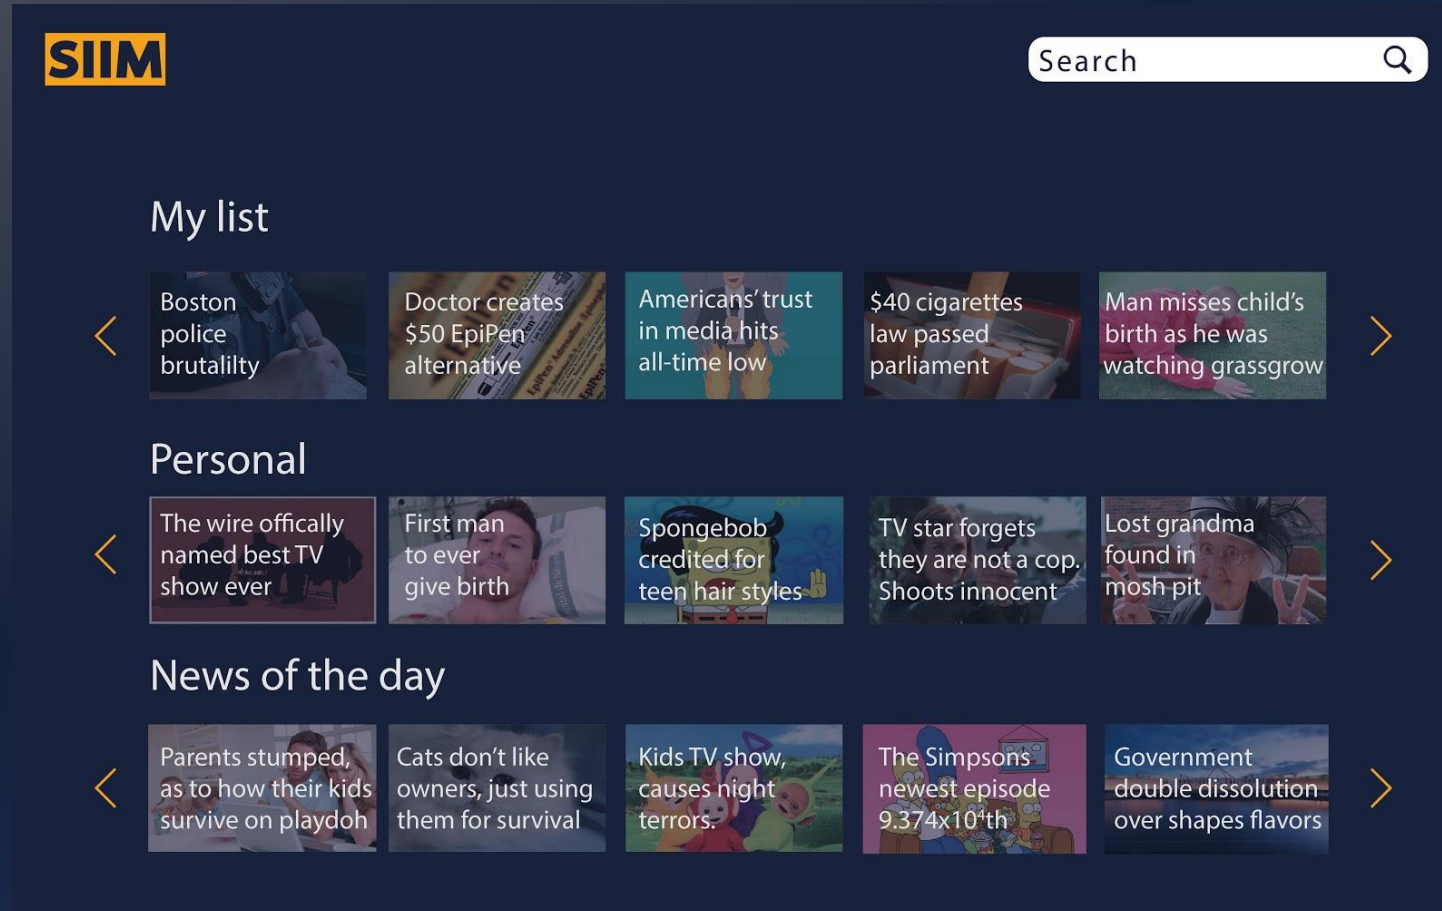

First Stage of Design Structure - Prototype

- In order to have a better impression of the site look we took two initial steps:
 - Wireframe and mockup creation
 - Color palette and logo creation

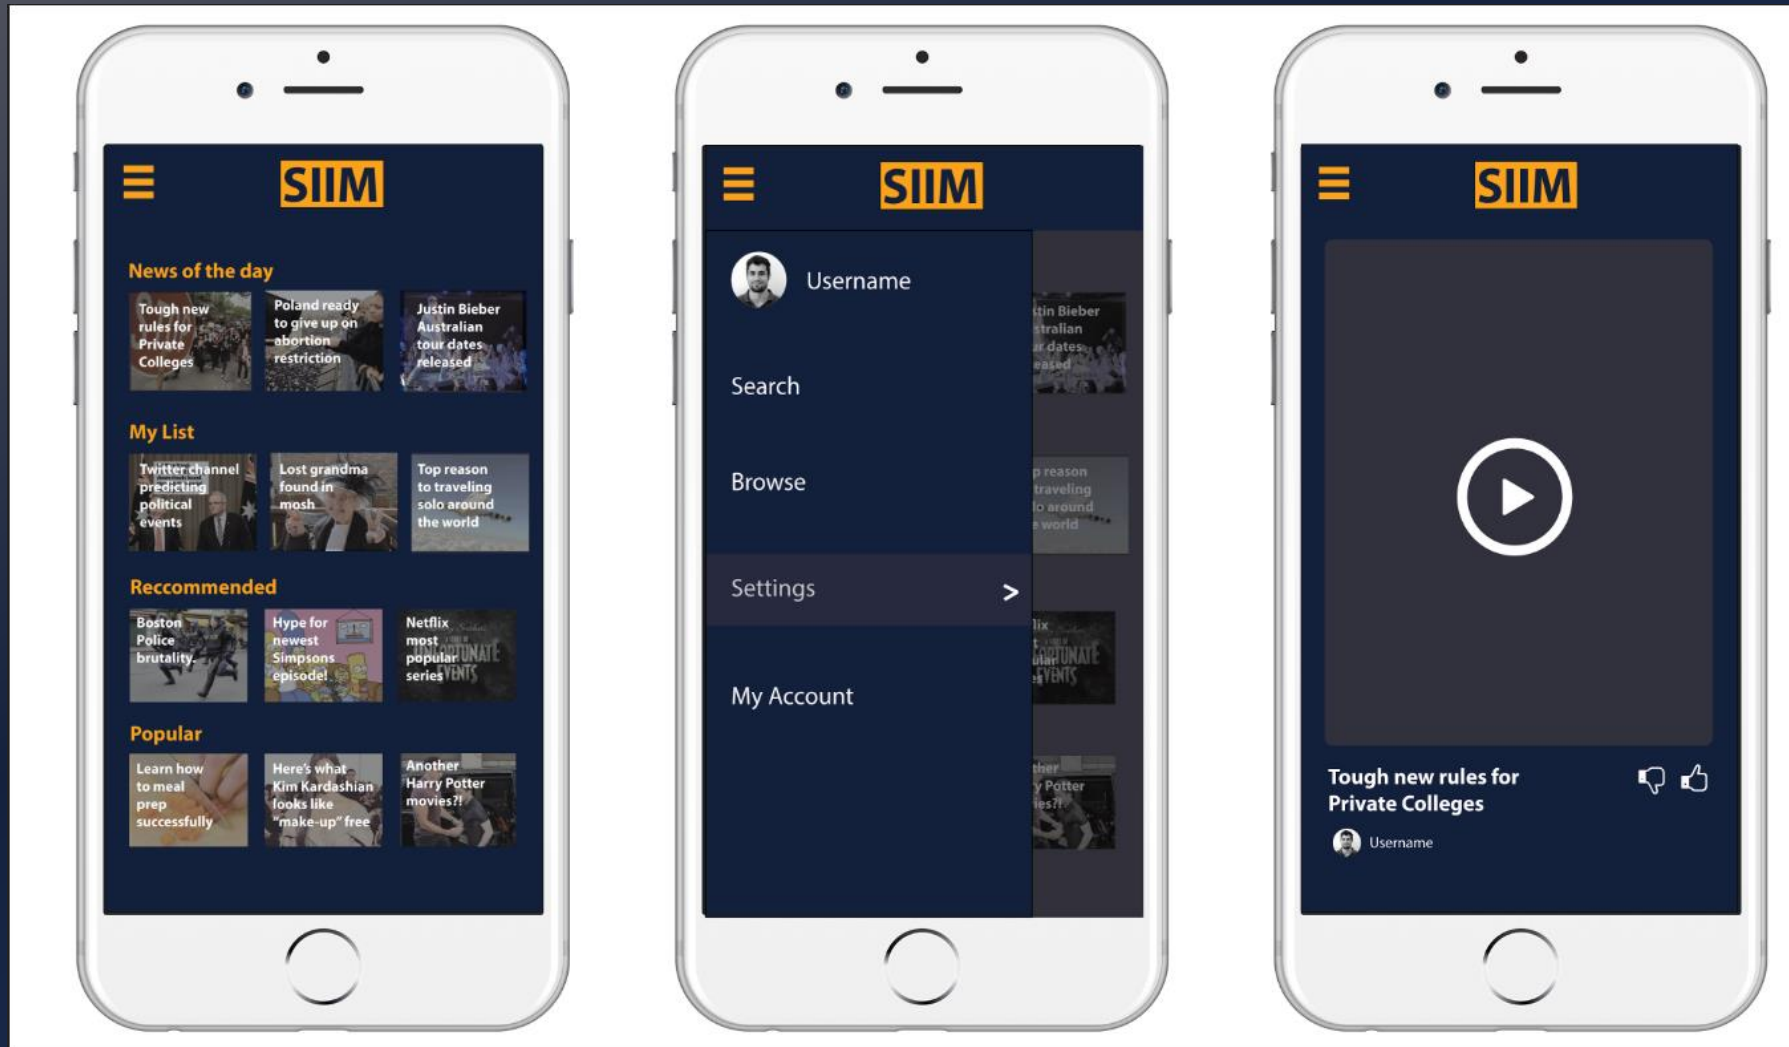

First Initial Wireframes

Page Mockup

Application Mockup

Color Palette and Logo Creation

Second Stage – Page Creation

- At this stage, the design was decided to be executed as a website since it provided us with a lot more control and interactivity development over shorter periods of time
- Decided on a Reddit-like algorithm for analyzing and curating of user created articles
- Included the foundation of the main page structure
- Use of place holder images
- Submenu creation with static links

First Stage – Home Page

First Stage – Account Page and Submenu

Reddit algorithm

- In order to curate the news appropriately we used a Reddit like algorithm
- Algorithm gives scores based on upvotes/downvotes and time of publishing
- Newer articles will have a higher impact than old one, old articles rank will not fall after a certain point but newer articles will have priority

How it Works

Given the time the entry was posted A and the time of 7:46:43 a.m. December 8, 2005 B , we have t_s as their difference in seconds

$$t_s = A - B$$

and x as the difference between the number of up votes U and the number of down votes D

$$x = U - D$$

where $y \in \{-1, 0, 1\}$

$$y = \begin{cases} 1 & \text{if } x > 0 \\ 0 & \text{if } x = 0 \\ -1 & \text{if } x < 0 \end{cases}$$

and z as the maximal value, of the absolute value of x and 1

$$z = \begin{cases} |x| & \text{if } |x| \geq 1 \\ 1 & \text{if } |x| < 1 \end{cases}$$

we have the rating as a function $f(t_s, y, z)$

$$f(t_s, y, z) = \log_{10} z + \frac{y t_s}{45000}$$

Third Stage – User Testing

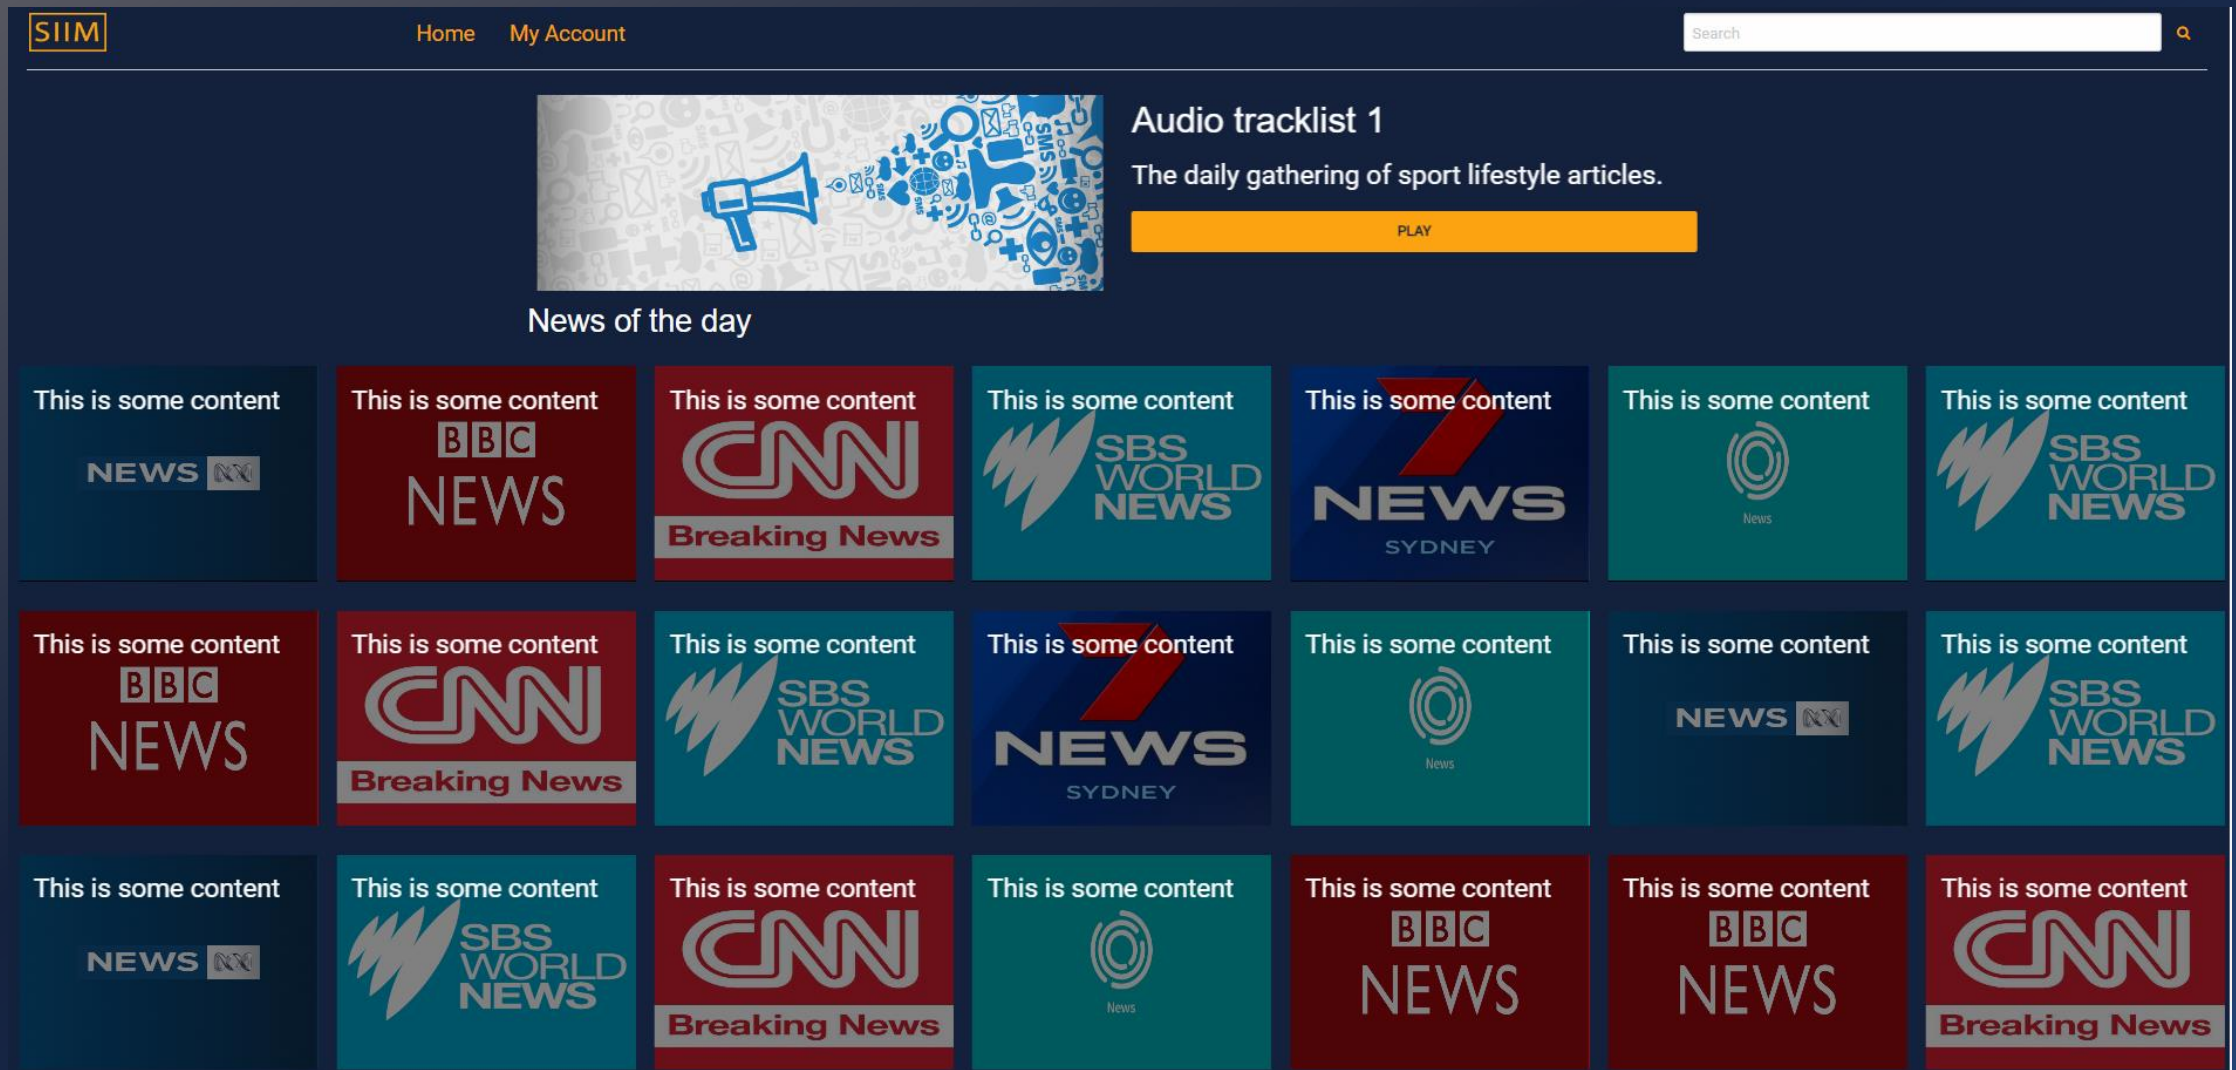

- The second stage of the design process included the introduction of audio listening as the main functionality feature
- Account menu creation as an overlay
- Polished design of the web application for aesthetic feedback

Introduced Audio Functionality

- User Has the ability to click on image with play button in order to bring up the media player
- Media player used with dummy audio files of random songs.
- Media overlay able to be minimized or removed

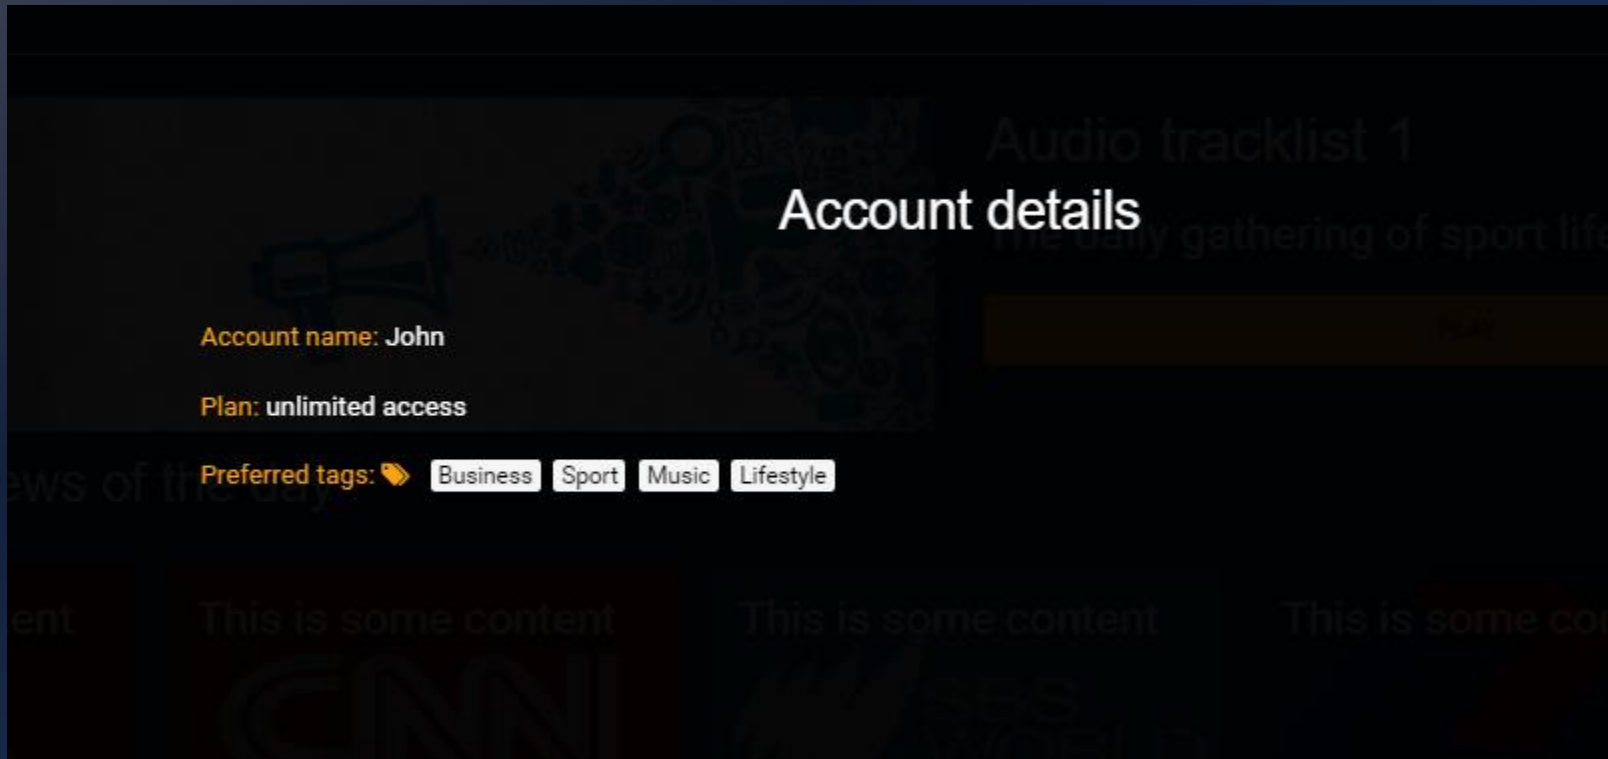

Polished Aesthetic Design

Account Menu

- Account menu shown as an overlay with minimal detail
- Show of used for curating

Fourth Stage - Iteration

- The fourth stage was based on iteration based on user feedback
- Account Menu stylized to account for a more in depth profile of user and
- Tag selection menu created
- Improvements over main page
- Narrating functionality enabled
- Main articles based of user tags

Account Menu - Iteration

Account Menu

- Users feedback believed reputation system was not encouraging enough
- Users believed in the potential of Speak2Me as a link to employers.
- Account imitates account similar to Task Overflow website in order to both encourage users to participate with milestones and rewards as well as provide companies with profiles of outstanding users.
- Reputation system now based on points awarded on every action, positive or negative.

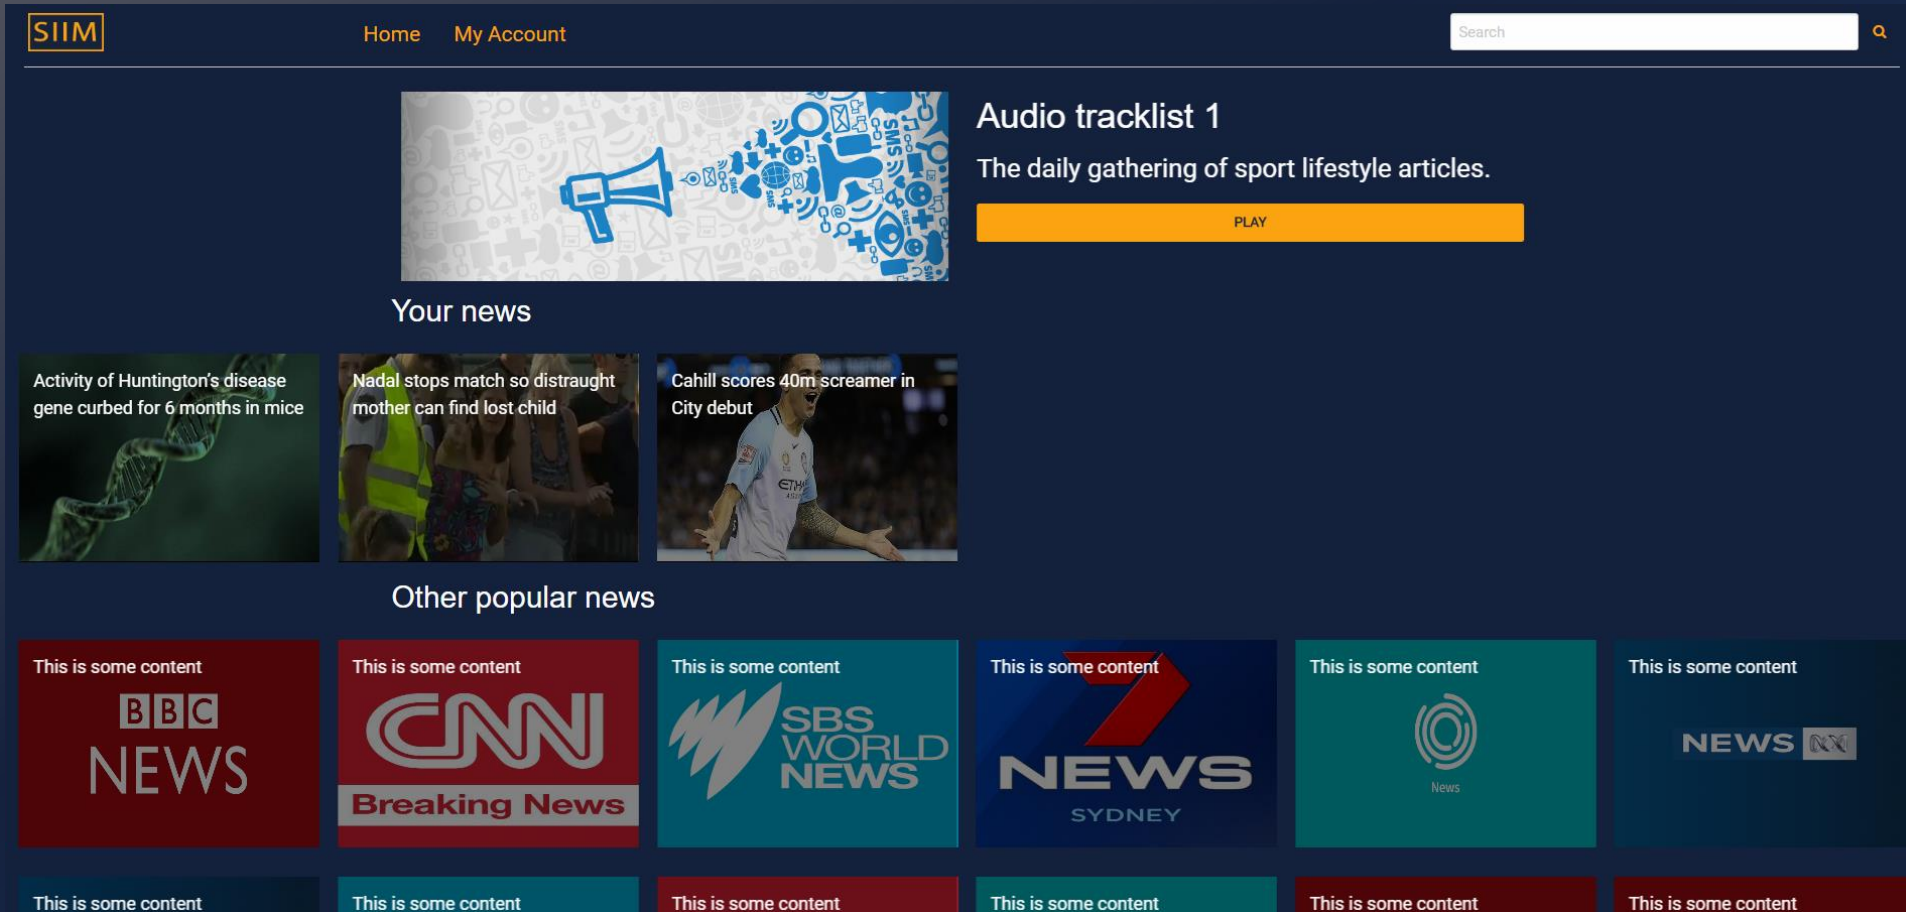

Tag selection menu - Iteration

Tag selection menu

- Tag menu created to provide users with a dynamic selection of their tags
- Tags selected here will be immediately implemented in the user profile and will dynamically change the shown in the home page.

Main Page - Iteration

Main Page - feedback

- The main feedback on the main page was that users wanted to see the information stylized in a less clutter way.
- Users wanted to see their personalized stream first above all.
- Users wanted to see where the articles were coming from in terms of the tags they have selected.
- Audio files were dummy songs

Main Page - changes

- Personalized stream takes over the main page as the first category shown
- The stream shows a dynamic representation of the tags selected
- Narrating functionality enabled with audio files playing actual narrations of selected articles
